DETAILED ACTION

This communication is responsive to after final amendment filed on March 02, 2005.

Response to Arguments

1. Applicant's arguments, see pages 6-7, filed on March 02, 2005, with respect to claims 1-28 have been fully considered and are persuasive. The final rejection of claims 1-24 has been withdrawn.

Allowable Subject Matter

2. Claims 1-28 are allowed.

The following is an Examiner's Statement of Reasons for Allowance: Claims 1-28 are allowable over the prior art of record because the Examiner found neither prior art cited in its entirety, nor based on the prior art, found any motivation to combine any of the said prior art which teaches a method for providing a user access to an extended color gamut digital image and for obtaining payment thereof, comprising the steps of representing the extended color gamut digital image with a limited color gamut digital image and one or more associated residual image(s) represent a difference between the extended color gamut digital image and the limited color gamut digital image, storing the limited color gamut digital image and the associated residual image(s) in an electronic memory, and providing the user or user's designee access to the associated residual image(s) after providing the user or user's designee access to the limited

color gamut digital image in order to provide a preview image and obtaining a payment from the user or user's designee.

Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. Johnson (Publication No. US 2001/0019630) discloses a method for transferring and displaying compress images.

b. Parker et al (US Patent No. 5,895,738) discloses an imaging system with an extended gamut color imaging process using four colors side by side in a single pass with a minimum amount of color de-saturation and with a minimum number of image registrations.
